

Packaged offerings that make large wireless WAN deployments easier to purchase and deploy

Overview

Complete WWAN Packages. Now wireless carrier/indirect channel sales personnel and other partners can more easily support customers with large WWAN data service deployments

Solution-focused. Targeted to specific customer applications, evolving w/market input, tailored per carrier

Collaborative. The program is designed to motivate carrier personnel and agents/partners to team up in support of customer opportunities

Partners

NetVersant. Guaranteed installation services virtually anywhere in the US via 2,200+ technicians nationwide (customers include Bank of America, Starbucks, REI, airports, government, etc.)

Mobile ID Solutions. Primary Junxion Complete program contact for pre-sales support, solution architecture, program management and project management. MIDS also brings knowledge of government grants that may pay for some or all of a Junxion Complete customer deployment (200+ Junxion customers to date including Yahoo, Procter & Gamble, McKinsey & Co, NASA, Dept. of Homeland Security, various public/private transit agencies, etc.)

Vendors. Coordinated by Mobile ID Solutions, third party vendors provide solution components such as auxiliary modem antennas, external cases, remote security devices, WWAN amplifiers, etc.

Carriers. Wireless WAN data services provide the underlying connectivity that powers Junxion Complete

Solutions

Landline Replacement. Data service alternative (due to price, performance and/or availability)

Landline Fail-over. Data service back-up (using existing router or WAN Juggler™ integrated fail-over feature)

Telemetry. Data service for retail point of sale systems, ATM machines, kiosks, monitoring/control

Portable Networks. Event connectivity, mobile work teams, disaster response, visitor connectivity, telecommuting

Security. Remote data connectivity for security devices (video, audio, sensors, etc.); grants often available

Mobile. Data service for fleet vehicles (military spec durability when coupled with Junxion's mounting bracket)

Mobile Fail-over. Back-up connection to existing wireless data services in vehicles (w/WAN Juggler integrated fail-over)

Public Transit. Data service for buses, trains, vanpools (GPS, monitoring/control, passenger connectivity, etc.)

Public Transit/security. Transit data service plus remote security devices (video, audio, etc.); grants often available

Private Transit. Data service for shuttles, vanpools/carpools, taxis, limousines

More. Continually evolving in collaboration with carrier partners and customers.
